A welder should bear in mind that proper protection is absolutely necessary to guard himself against the danger of electric shocks, burns, and the injury that maybe brought by welding activities.

Made from specially treated leather these protective garment are heat and moisture resistant.

It provides good protection during the welding, specially when the welder has to work close to the workpiece, or where movement is limited.

It is specially important that a welding jacket is worn when welding in the overhead position, to protect the body and arms against falling sparks and slag.
